

# oh.. stuck?

## We all have a technology problem we need to solve – what's yours?

No matter what project you are engaged in, there always seems to be a challenge or two that gets in the way of your ultimate goal – success, and happy clients. Does the stress of not meeting these goals keep you awake at night, especially when everybody is looking to *you* to get things working? Who do you turn to, when you need to get “unstuck”?

### Let's talk about you.

You manage technology projects and teams for a living, but there are times when you don't feel like you're in control of what's going on. Do you ever feel like you are throwing lots of resources at a problem, without making any real progress?

When the success of your job depends on the performance of others, it can be easy to feel helpless in situations where you're faced with unexpected risks in your projects. Do you wish that you could focus on the things you enjoy in your career again, without all of the worry that new technology brings?

### I can help you

For the past decade, I have been helping my clients get "unstuck" in their projects, by finding creative solutions to the challenges they face on a day-to-day basis. If you feel like you are running in circles trying to solve your problems, maybe it is time for a different approach: *one that will help you and your team to step off the Ferris Wheel of the never ending project.*

Here are some of the ways that I deliver this transformation for my clients:

- When requirements are too complex, I simplify them, and engage in “the art of the possible”
- When your software is “off-the-shelf”, and your users aren't, I provide creative solutions
- When technology problems are stealing cycles away from your team, I get them back for you

### Where have I done this before?

As an experienced software and training professional, I have designed and developed CRM and business intelligence solutions for a wide variety of private and public sector clients, by leveraging the best available technologies to meet an ever-changing set of requirements. My extensive background in data integration and analytics has also created many opportunities to help my clients realize the full value of their technology investments, and help them through their software upgrade challenges.

### Problems can be beautiful, if we treat them as opportunities

I understand if you don't feel this way right now. I look forward to tackling your biggest and scariest technology problems, and as an added benefit, my optimism tends to be contagious as I begin to work with your team.

I pride myself on being the calm, confident and quiet person in the room, who can help you to work past your technology challenges, and move your project forward. I look forward to setting up a conversation, to see how we can work together, so you can get excited again about what technology can do for your organization. I look forward to talking to you soon.

Sincerely,  
Philip Richard, CTT+, CCDH, MCITP.
